

Project Scheduling Management

Lecture 1

Class Introduction

Instructor

Dr. Huang Dan

Sep 15, 2018

上海交通大学
Shanghai Jiao Tong University

Today's Agenda

- Welcome and Introductions
- Definitions – Initial Discussion
- Course Objectives
- Conceptual Schedule
- Team Project, Homework
- Questions?

- Mobile Phone: 135-8590-6080
- Email: huangdan@sjtu.edu.cn

Why we need to learn PM?

- Complicated Relationships
- Enormous Information
- Demanding Requirements

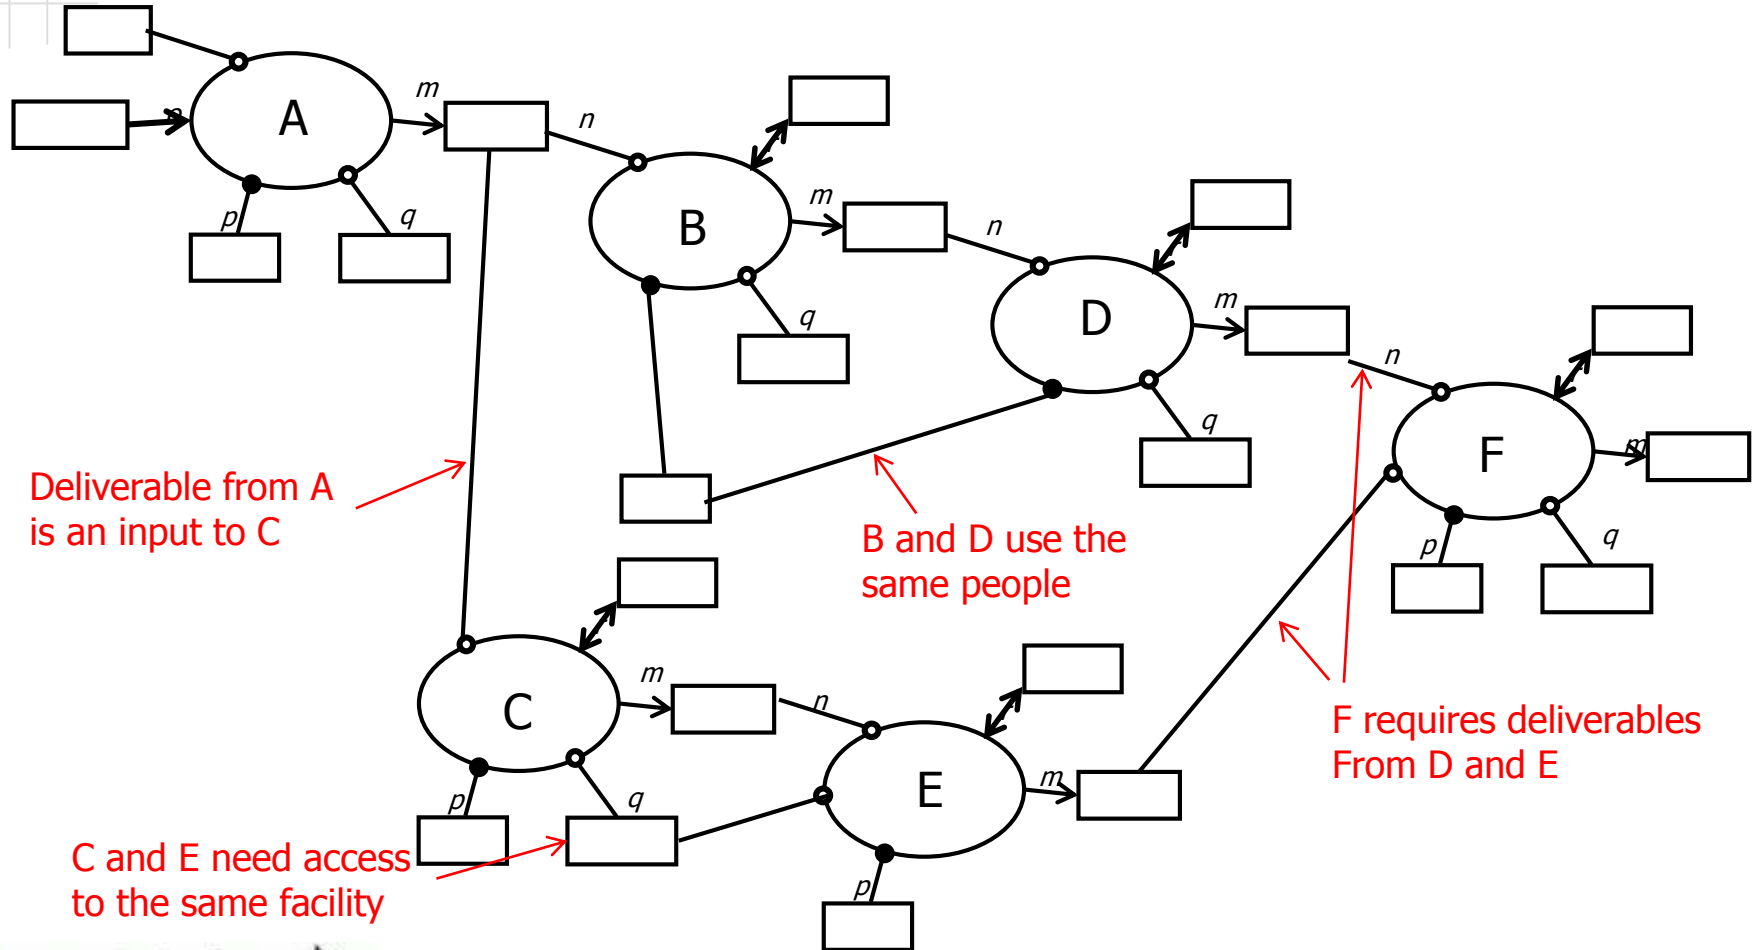

Project Definition

- A **Project** is a set of tasks that
 - Are related to each other
 - Have a specific objective to be completed within certain specifications
 - Have defined start and end dates
 - Have funding limits
 - Consume resources

- Ongoing operations?

Project = set of related tasks

The “Iron Triangle”

- Why “iron” triangle?
 - Risk if all three are constrained !

Faster-Better-Cheaper???

The NASA New Millennium Program: Faster, Better, Cheaper

craft were small
16 projects unde
resulting success
spacecraft norm
advocates placed

NASA Responds to the Columbia Accident Report: Farewell to Faster - Better - Cheaper

By [Keith Cowing](#) Posted Monday, September 15, 2003

Howard E. McCurdy, *Faster, Better, Cheaper: Low-Cost Innovation in the U.S. Space Program*, The John Hopkins University Press, 2001.

System Definition

- A **System** is a set of physical or virtual objects whose interrelationships enable desired function(s).
 - more than the sum of its parts
 - Undesired (emergent) functions often exist
 - System complexity scales with the number of objects as well as the type and number of interconnections between them
 - Instantaneously available functions, versus “lifecycle” properties (scalability, flexibility, robustness ...)
- A Product is a “System” sold for profit

Example System: F/A-18 Aircraft

- Clean sheet design ~ 1978 F/A-18 A/B
- Re-designs: C/D (1987), E/F (1999)
- Hardware, Software, Humans ...
 - What is inside the system boundary?

Complexity versus Uncertainty

Uncertainty

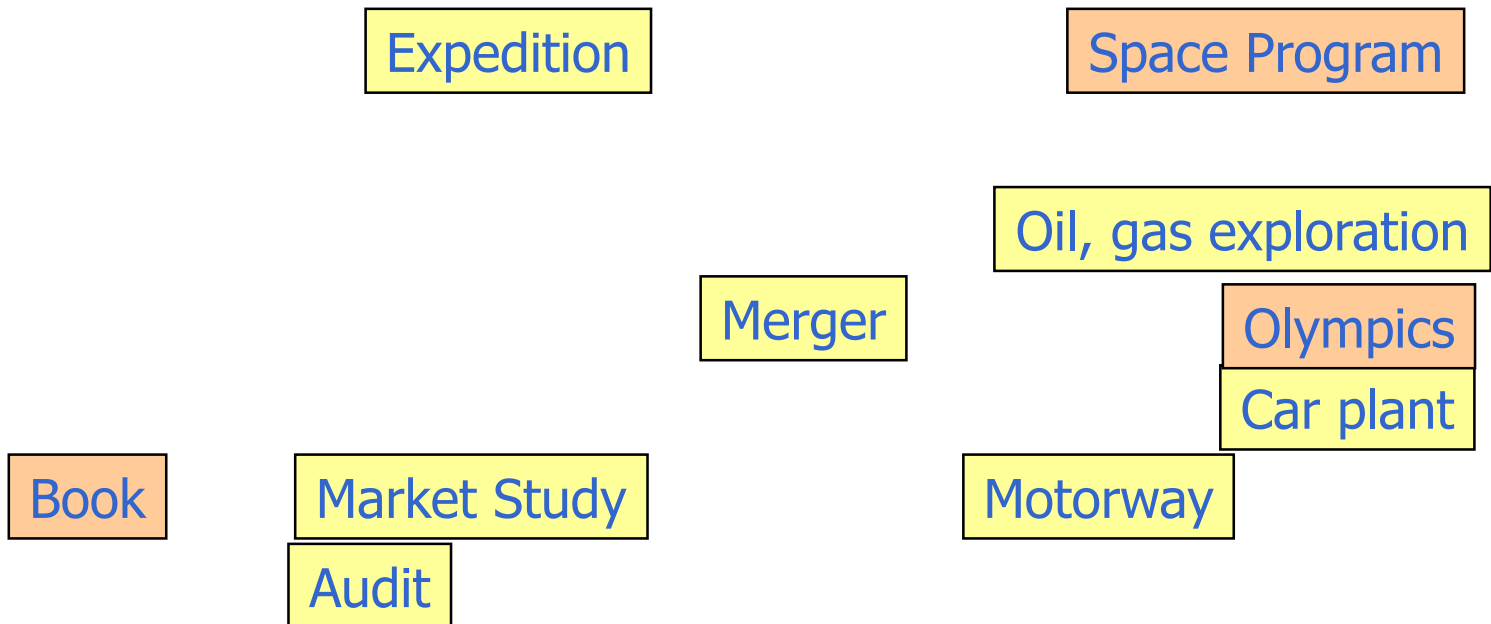

High

Low

Low

High

Complexity

Why Software Projects Fail

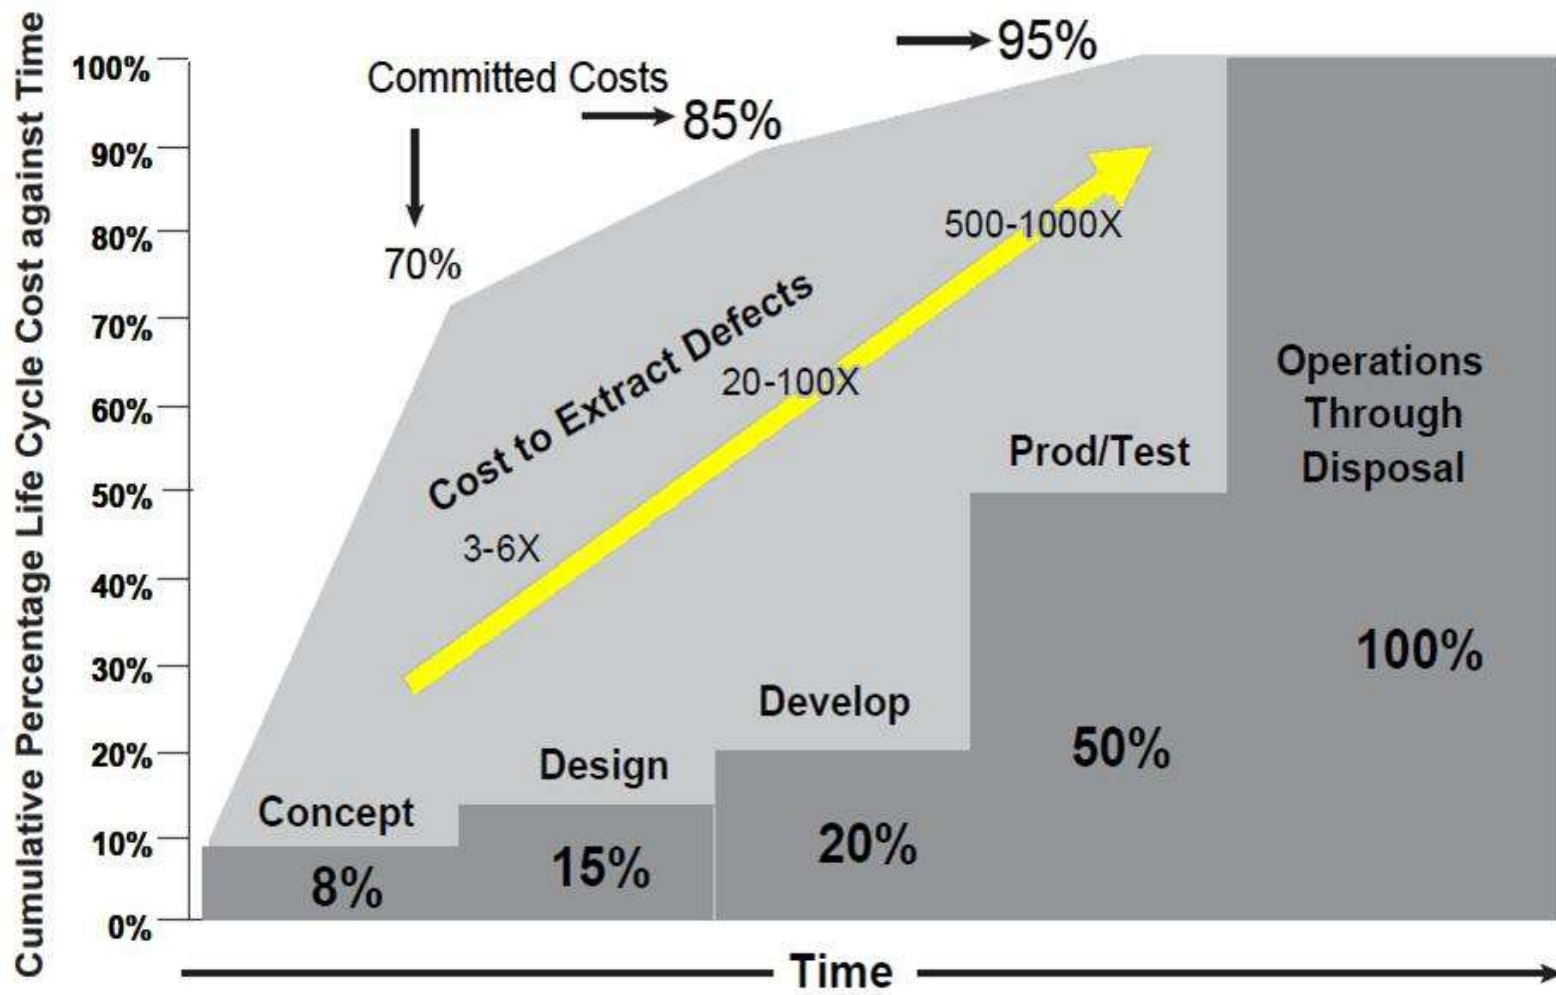

Overruns: 189% cost; 222% schedule

352 companies - 8,000 software projects. Source: The Standish Group, 1995

Project Management

- **Project Management** comprises a body of methods and tools that facilitate the achievement of project objectives
 - Within time
 - Within cost
 - Within scope
 - At the desired performance/specification level
 - While effectively and efficiently utilizing resources
 - While carefully managing risks and opportunities

History of Project Management

- Big Projects since antiquity
 - Pyramids (Egypt), Great Wall (China)
 - Enormous workforce, but little documented evidence of formal project management
- Formal Project Management
 - Henry Gantt (1861-1919) → bar chart 1910
 - 1957 Sputnik Crisis → revival of “scientific management”
 - Polaris (1958) → Project Evaluation and Review Technique (PERT)
 - DuPont Company (1960) → Critical Path Method (CPM)
 - 1960’s NASA projects: Mercury, Gemini, Apollo
 - Work Breakdown Structures (WBS)
 - Cost and Schedule Tracking, Configuration Management

Comments about early PM

- Project decomposition necessary due to complexity
- Resource allocation and workload smoothing
- Schedule urgency .. "before the decade is out" JFK
- Circumstances
 - Complex Relations between Government and Contractors
 - "Shielded" from Society, Competition, Regulations
 - Cold War Pressures for Nuclear Power, Space Race ..
- Other Innovations
 - Project Manager as a central figure
 - Beginnings of Matrix Organization
 - "Earned Value" – adopted by USAF (1963)
- Professionalization since 1969
 - Diffusion into other industries: computers, automotive ...
 - Project Management Institute (PMI) founded – PMBOK
 - ISO 10006:1997 Quality in Project Management
 - Recent criticism about PM standards as "bureaucratic"

Fundamental Approaches

- How to represent task relationships?
- Network-based (graph theory) methods
 - CPM, PERT,
 - Task is a node or an arc
- Matrix-based methods
 - DSM - Tasks are columns and rows
 - Interrelationships are off-diagonal entries
- System Dynamics
 - Feedback loops, causal relationships
 - Stocks and flows simulation
 - Tasks that are done or waiting to be done are stocks – “amount of work”
 - Doing project work causes a “flow”

The Big Dig

The Big Dig

预算超支的建筑工程对比

超出预算的全球建筑工程（以美元计算）*

数据来源：Podio，《明镜周刊》，《纽约时报》

Boston Big Dig

- Why this project?
- Risks involved?
- Success?/Failure?
- Outcome?

Functional View of Project Management

- Preparing
- Planning
- Monitoring
- Adaption
- Learning

Course Objectives

- Introduce advanced methods and tools of Project Management in a development context
 - CPM/PERT, Critical Chain, Design Structure Matrix
 - System Dynamics
 - Earned Value Management
- Understand how methods work (strengths, limitations)
 - Industry Examples
- Gain appreciation for organizational and human aspects
 - Case Studies
 - Managing International Projects, Portfolios of Projects ...
- Learn from each other
 - Class Discussions
 - Project Assignments
- → Improve development projects in your career/firm

Conceptual Schedule

- Module 1
 - Project Preparation Planning Techniques
- Module 2
 - Project Monitoring and Adaptation
- Module 3
 - Organizational and Human Issues
- Module 4
 - Student Projects and Summary

Class Schedule

Week	Date	Contents	Notes	
			HW	Project
1	15 Sep	L1: Introduction		Project Assignment Out
2	22 Sep	L2: CPM & Critical Chain Method	HW1 out	
3	29 Sep	L3: Probabilistic Scheduling /DSM	HW2 out	
4	6 Oct	L4: System Dynamics		Project Proposal Due
5	13 Oct	L5: Cost and Risk Management	HW3 out / HW1 due	
6	20 Oct	L6: Project Soft Factors	HW2 due	
7	27 Oct	L7: Engineering Ethics		
8	3 Nov	L8: Student Presentations & Conclusions	HW3 due	Final Presentation due

Readings

■ Required Readings

- NO Paper Class Reader Packet
- Readings sent out in pdf
- Read ahead of lecture ~ 1-2 papers/chapters per session
 - [Check your emails for reading assignments](#)

■ Optional Readings

- Textbooks
- Purchase only if you think useful beyond class
 - (e.g. PMI, amazon.com etc)

Readings

- McConnell, Steve ; *Rapid Development: Taming Wild Software Schedules*, Redmond, WA:Microsoft Press, 1996.
- Forsberg, Kevin ; Mooz, Hal , and Cotterman. Howard, *Visualizing Project Management, A Model for Business and Technical Success*, Third Edition, John Wiley & Sons, Inc. 2005.
- Goldratt, Eliyahu M. ; *Critical Chain*, Great Barrington, MA: The North River Press, 1997.
- Highsmith, James, *Adaptive Software Development: a collaborative approach to managing complex systems*, Dorset House Publishing, 1999.
- Kerzner, Harold, *Project Management: A Systems Approach to Planning, Scheduling, and Controlling*, 9th ed., New York: John Wiley & Sons, 2006.
- *Guide to the Project Management Body of Knowledge, A (PMBOK Guide)*, paperback, Third Edition , By: Project Management Institute, <http://www.pmibookstore.org>

Project Assignment

- Apply Design Structure Matrix (DSM) method, generally at your sponsor company site
- Survey of Methods & Tools in company
- Analyze Success or Failure of a significant Past Product/System Development Project – case write up
 - Work in teams of 6 (nominally)
 - 1-page project proposals due on
 - Get approval/feedback
 - Project Update due
 - Final presentation in class

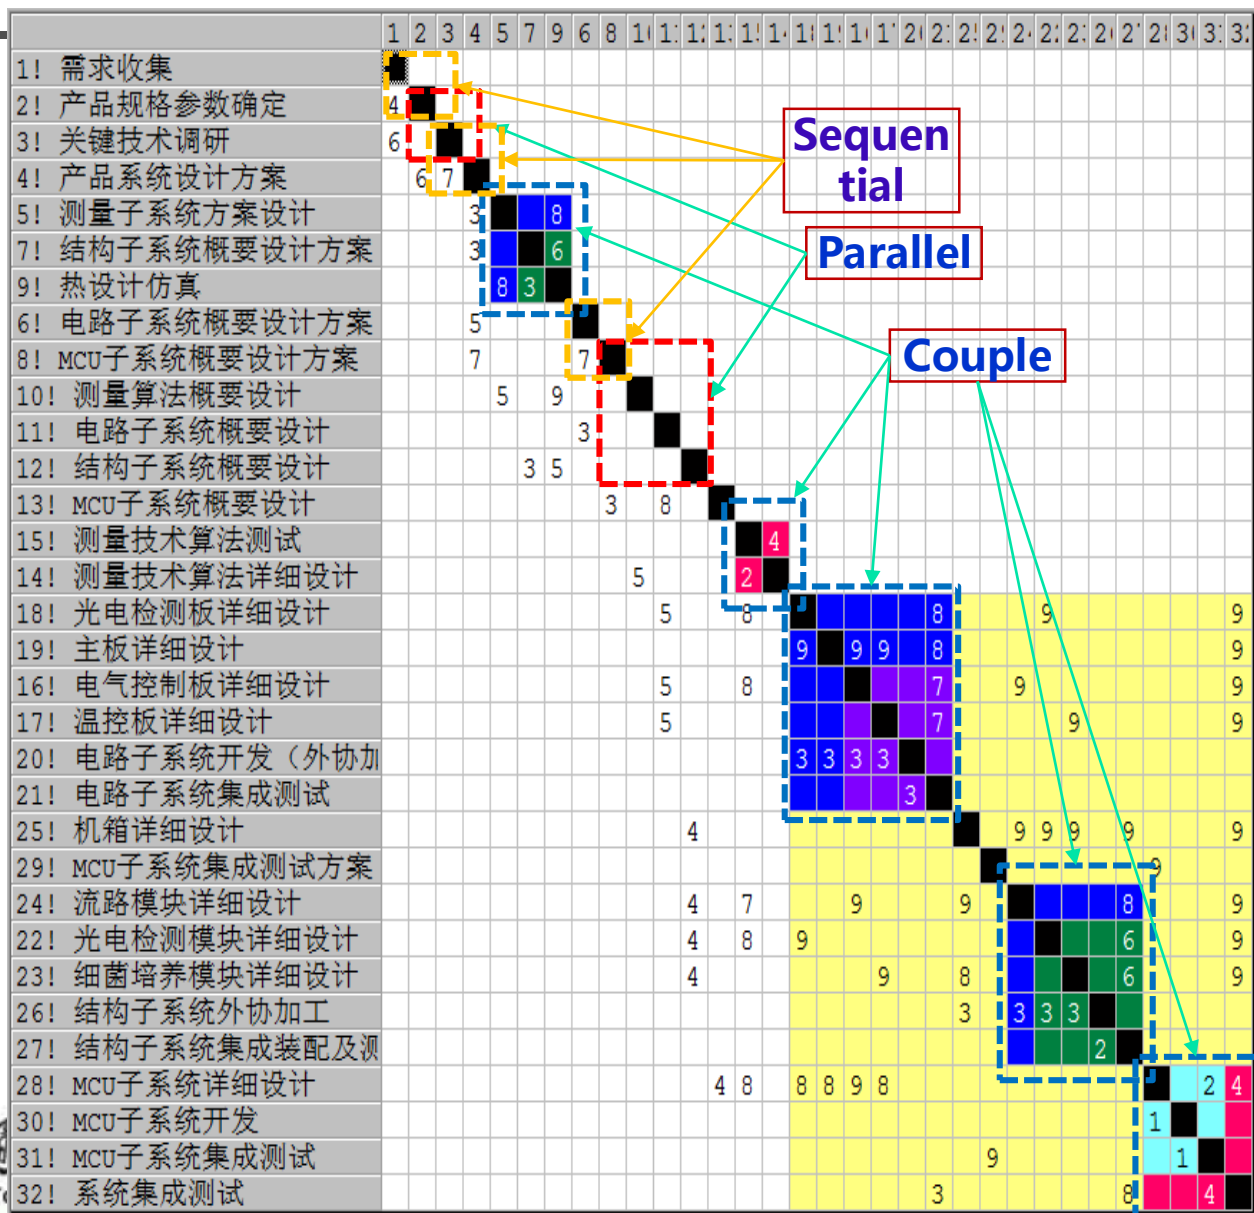

Previous Project Examples

Project Completion Time Distribution

Updated Partitioned DSM

Shanghai Jiao Tong University

Homework Assignments

- 3 Individual assignments, but can cooperate (**acknowledge !**)
- Don't spend more than ~5-10 hours per HW !

HW	Topic
1	Create a project plan and find the critical path (CPM)
2	Create a DSM model and analyze the iterations
3	Setup project monitoring and cost control (EVM) & Financial analysis

Grading

- Homework 45%
- Project Assignment 30%
- Active Participation 25%
- Total 100%
- All project team members receive same project grade, work together
- People do get A,B,C ...even D ... you want a good grade? ... **you have to earn it !**

Remember

- Check your emails regularly. Take a look at what's already sent to you.
 - Homework
 - Readings for next class
 - Other things to share
- Laptops are NOT allowed in class sessions

Let's end on an uplifting note

- “Nothing is particularly hard if you divide it into small jobs.” – Henry Ford
